Introduction

The Ship Eats application is an application where students, staff and lecturers at Peninsula College: The Ship Campus are given the opportunity to buy food at a cheaper price after lunch hours.

The whole point of the application functioning after lunch hours is to sell off leftover food that is still in good condition and is edible. Therefore, in this development, it focuses on contributing to one of the Sustainable Goal: Zero Hunger.

Problem Statement

1. Limitations of budget for students to buy food.
2. Leftover food is wasted and thrown away when not bought.
3. Students not knowing food availability, wasting time and energy when walking to cafeteria.
4. Employees of cafeteria not knowing the stock availability, not aware of food availability.

Solutions

1. Discounted Pricing for Surplus Food
2. Surplus Redistribution System
3. Flexible Pre-Ordering & Reservation
4. Real-Time Inventory Tracking & Dashboard

Objectives

1. To enable sellers to manage the menu of leftover food, track incoming orders, and update order status through a dedicated seller interface.
2. To develop an application selling leftover food at a discounted price in order to reduce food waste.
3. To allow students to order and reserve unsold food, make payments, and be notified about successful payments and when students' orders are ready for pickup through the application.

Methodology

Agile Method - Why?

- Iterative (can reflect after every sprint, then make improvements)
- Imparts teamwork and communication when working in a team for the project.
- Prioritises the user's satisfaction
- Flexible, scalable

Type Of Agile Methodology - Scrum

- Broken up into 2- to 4-week sprints
- Improved Quality System
- Involves adaptability
